# ROAD MARKING PAINT AND MACHINE

**hot melt reflective coating:**

Thermoplastic road marking paint consists of resin , EVA, PE wax, fillers materials, glass bead, which is solid powder condition at normal temperature. If it is heated to 180-200 degrees by heat at fusing pot under construction. it will appears flowage, coating pot under construction, it will appears flowage, coating the paint to the road surface will form hard film, It has full line type, strong wearing resistance and other flowage. Sprinkling reflecting glass micro beads on the surface under construction, it has good reflecting effect at night. It is widely applied in highway and road. According to the environment used and the different construction requirements, we can supply different types of paint for our customer option.

**FEATURES**

- Strong adhesion strength:** Resin content is reasonable, and it was added special rubber elastomer in the primer, so it has strong adhesion strength . If the construction technique is reasonable, there is no peeling off.
- Good cracking resistance:** Thermoplastic line marking is easy to form crack because of the temperature variation of thermoplastic line marking.
- Bright color:** The paint adopts the color of the highest level with reasonable proportion, so it has good weather resistance and will not change color if long term exposure.
- High usage ratio:** The major feature of paint is low density, big volume and high usage ratio.
- Good dirt resistance:** The dosage and quality of PE wax are the key point of impacting the dirt resistance. PE wax of Exxon is our first choice for many years.

**THEORETICAL DOSAGE:**
